

Catstudio - Map Series

Manual

Types of map parts

× 4 (4-way)

   
(Y 0-degree) (90-degree) (180-degree) (270-degree)

name+number

 0 degree	 90 degree	 180 degree	 270 degree
--	--	---	---

Characters at the end of the word

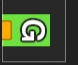

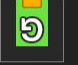

Parts list

★ = **Number** (variation) **_A _B _C _D** = Rotation Type

start★

 _A	 _B	 _C	 _D
--	---	---	---

goal★

 _A	 _B	 _C	 _D
---	---	---	---

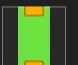

warp★

 _A	 _B	 _C	 _D
---	---	--	---

Composition

road★

 _A	 _B	 _C	 _D
--	---	---	---

curve★

 _A	 _B	 _C	 _D
---	---	---	---

forked★

 _A	 _B	 _C	 _D
---	---	--	---

cross★

 _A	 _B	 _C	 _D
---	---	---	---

roadstop★

 _A	 _B	 _C	 _D
---	---	---	---

roomgateA★

 _A	 _B	 _C	 _D
--	---	---	---

roomgateB★

 _A	 _B	 _C	 _D
---	---	---	---

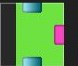

roomgateC★

 _A	 _B	 _C	 _D
---	---	--	---

roomgateD★

 _A	 _B	 _C	 _D
---	---	---	---

roomwall★

 _A	 _B	 _C	 _D
--	---	---	---

roomcornerA★

 _A	 _B	 _C	 _D
---	---	---	---

roomcornerB★

 _A	 _B	 _C	 _D
---	---	--	---

roomcornerC★

 _A	 _B	 _C	 _D
---	---	---	---

roomflat★

 _A	 _B	 _C	 _D
---	---	---	---

example :

Rule of arrangement Part 1

Map Series : https://www.catstudio.jp/ua_mapseries.html

If the marks at the end of the road are the same color, they will be connected.

Type placed

Placement example

Rule of arrangement Part 2

Assets used : Grid Map for FREE

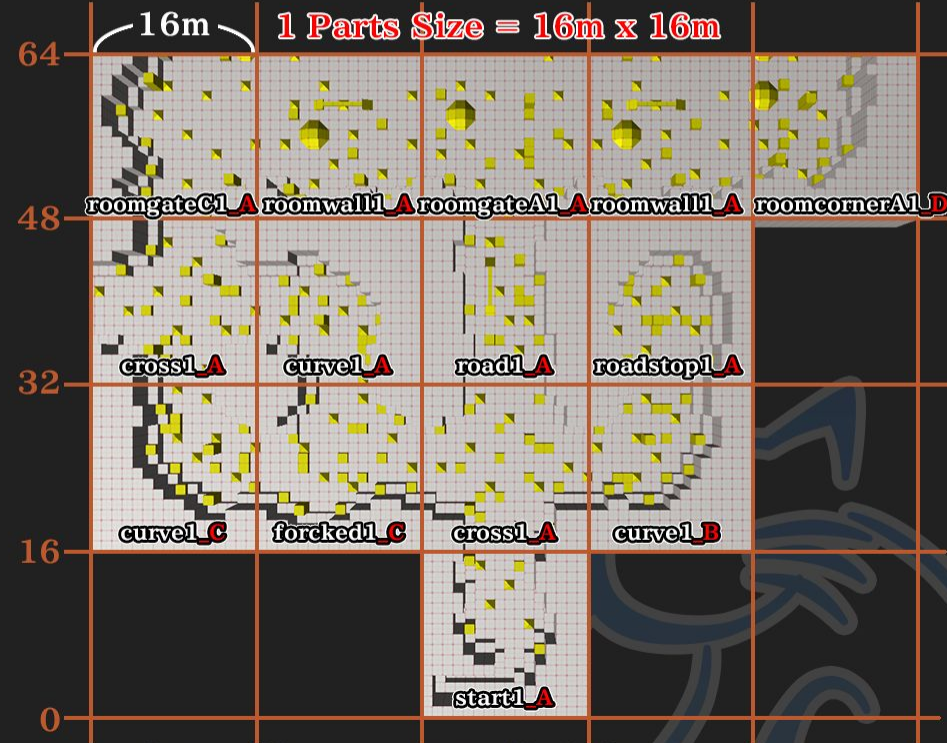

https://www.catstudio.jp/ua_gridmapforfree_en.html

Arrangement example

(Please pay attention to "file name" and "mark")

An example in which a prefab file is arranged with reference to the left figure

<https://www.catstudio.jp/>

Collision

Render

Object Collision(col_o)

Wall Collision(col_w)

Partition Collision(col_p)

Object Collision (Name : col_o) : It is a collision close to the appearance object

Wall Collision (Name : col_w) : It is a collision that becomes a wall

Partition Collision (Name : col_p) : It is a collision that is blocking a place where you can not go, such as a gateway

Example:

col_w can be used to judge that the character strikes the ground and

col_o can be used to judge against bullets, magic and the like.

Texture

Size : Max 2048 × 2048

Type : Color Texture, Normal Map

You can change the texture size with Unity's Inspector

Folder structure

[Map Series List:https://www.catstudio.jp/ua_mapseries.html](https://www.catstudio.jp/ua_mapseries.html)

It will be added when you import other map series

Contains scripts and files to share and use in the sample scene

Asset name

Readme and manual

Effect materials and textures

FBX files, materials and textures such as ground and arranged objects

Post Processing Stack data

Prefab files are located under this folder

Includes map prefab file of sample with part prefab file placed

Includes ready-to-use parts pre-assembled in the 16 m x 16 m range

Includes object prefab file that prefabricated each fbx file

Sample scenes

Dedicated shader (only for some map series)

<https://www.catstudio.jp/>

Universal Render Pipeline(URP) shader

How to use URP compatible shader:

- CatStudio \ Maps \ (Asset Name) \ Shader \ (Asset Name) Shader_URP.unitypackage
Double-click to import
- CatStudio \ Maps \ LavaMap \ Model \ Materials \ OOO.mat
Please change the shader of the material that has turned pink to the imported shader

Note:

- Lightweight render pipeline (LWRP) is not supported.
- Only assets that include a dedicated shader include URP-compatible shaders
Other than that, Standard Shader is used, so please convert it to URP shader using Unity function.

How to use Post Processing Stack data

- 1: Import Post Processing from Package Manager
- 2: Double-click the package file in the PPS folder to import it
- 3: Change Color Space to Linear (Edit / Project Settings / Color Space)
- 4: Open the sample scene in the PPS folder

Note:

- PostProcessingStack data was created with version 3.0.1.
